

Building a machine, and a generation of makers.

Forty students. One all-terrain vehicle for the mBAJA 2027 national competition. And a technical outreach drive putting mechanics into the hands of school students across Kurnool.

12th

nationally, virtuals 2026

40

students, five sub-teams

already committed by our institute

THE 2027 VEHICLE

ROLL CAGE · 3/4 ISOMETRIC

The first BAJA team from our institute — already 12th in the nation.

12th
IN INDIA

We placed **12th nationally in this year's virtuals round**, out-scoring a large number of far older, better-resourced teams on technical standing and design soundness. We are now gearing up to prove that worth in the phase that counts most — actual manufacturing.

We are a 40-member, cross-disciplinary team of engineering and management students building an all-terrain vehicle for the grueling mBAJA 2027 national competition.

We started with a blank slate — no inherited resources, no legacy workshop. We built our knowledge base by reaching out to veteran teams across the country, and turned every technical setback into an engineering solution.

WHAT MBAJA IS

bajasaeindia.org →

Run by **SAE India** at bajasaeindia.org, mBAJA is the country's premier collegiate engineering design competition — a multi-stage evaluation of vehicle speed, endurance and extreme off-road capability, judged by industry engineers. Teams clear a virtual design round before earning the right to manufacture and race.

Chassis

Powertrain

Brakes

Steering

Suspension

Engineering beyond the track.

Our own struggle to find early engineering resources shaped our long-term mission: making sure the next generation here gets hands-on exposure to mechanics and robotics. We are launching a first-of-its-kind technical outreach drive across schools in the Kurnool city area.

We are executing it with our campus chapter of the **National Service Scheme**. NSS has a deep history of successful social drives here — this will be their first purely technical campaign. Our toolkits and curriculum, their volunteer network and logistics.

TEAM MONARCH BRINGS

- Toolkit design and assembly
- Demonstrations and mentoring
- A curriculum for each session

NSS BRINGS

- Volunteer network across the city
- School access and coordination
- On-ground logistics

OUR PROMISE

This is not a short-term promotional event. We are committed to fostering a lasting culture of manufacturing and mechanical engineering among underprivileged students in Kurnool.

₹2,00,000 committed. ₹4,00,000 to go.

To make both the BAJA 2027 vehicle and the Kurnool Initiative a reality, we operate on a highly optimised budget. Our institute has already committed direct funding, which proves our internal backing. We are raising the remainder through corporate partnerships.

SECURED

₹2,00,000

Direct institutional funding from our institute.

SEEKING FROM PARTNERS

₹4,00,000

In cash or in kind, across the build and the outreach drive.

ALLOCATION OF THE ₹4,00,000

70% vehicle · 30% outreach

INVESTMENT AREA	ALLOCATION	WHAT IT COVERS
Vehicle manufacturing	70% · ₹2,80,000	Raw materials, machining, safety equipment and logistics for the vehicle.
Community outreach	30% · ₹1,20,000	Development and distribution of mechanical toolkits for Kurnool schools.

Line-item accounting

Every rupee is booked against a line item before it is spent.

Written utilisation report

Partners receive a summary at the close of the season.

Institutional oversight

Funds are administered through our institute, not individuals.

No tiers. Joint partners.

We do not believe in hierarchical sponsorship tiers — no Gold, Silver or Platinum. Every organisation that steps forward, whether through financial aid or essential components, is a true Joint Partner.

Your brand becomes equally integrated into both halves of what we do: the national motorsport campaign and the local outreach programme. We win together, and we impact the community together.

WHERE YOUR LOGO APPEARS

01

On the vehicle

Body panels, seen at every dynamic event and in all race photography.

02

On team apparel

Worn by 40 members through the build season and the competition.

03

On outreach material

Every educational toolkit distributed to schools across Kurnool.

If products are easier than cash, here is exactly what we need.

If your organisation prefers to support us through products, equipment or concessions, these are the critical materials we require to complete the vehicle build.

- | | | |
|----|--|---|
| 01 | Raw materials & fabrication | AISI 4130 steel tubing, steel benders, general workshop hand tools. |
| 02 | Powertrain & lubricants | Engine oil, transmission fluids and lubricants. |
| 03 | Suspension & traction | Off-road terrain tyres, shock absorbers, air suspension systems. |
| 04 | Braking systems | High-performance components — for example, Bosch tandem master cylinders. |
| 05 | Team gear | Concessions or manufacturing partnerships for jerseys and safety apparel. |

Exact specifications and quantities can be discussed and agreed upon separately — tell us which lines you can cover and we will send the full spec sheet.

[Send us a spec request](#)

We would like to show you the build in person.

Be part of a resilient, student-driven team building a high-performance machine and empowering the youth around it. Two ways to start — pick whichever is less work for you.

Book a 15-minute call

Reply with a slot that suits you, or host us on campus and see the vehicle mid-build.
